STIMULATING HEALTH EQUITY IN AFRICA

The African continent has the highest burden of disease. Yet, it is underrepresented in clinical research. Many medical advancements are often not translated into improved health outcomes in Africa. To achieve health equity, clinical research is needed locally. For this reason, Africa Clinical was built; a network of local investigators and institutes that enables clinical research. Together, we further self-sufficiency and sustainability on the African continent.

Why join Africa Clinical?

- To have research-backed evidence of the status of diseases in your area
- To be a part of a continent-wide network
- To have a better understanding of clinical research
- To become trained in clinical research, ethical approval and working with your country's regulatory framework
- To become GCP trained
- To be able to back your experience with data
- To be supported as a site during clinical trials

What we strive to achieve

Education

For the local research centres

High-quality data

To increase treatment equity
